

nq · Connecting Your Shopify Store

A simple guide to link your Shopify store to your NQ dashboard — about 2 minutes.

BEFORE YOU BEGIN

Your NQ login email — we've created and shared this with you.

Access to your Shopify admin — you should be the store owner, or staff who can install apps.

STEPS

- 1 Sign in to NQ**
Open the dashboard link we sent you and log in with your email.
- 2 Open Brand Library**
In the left menu, click “Brand Library.”
- 3 Start the Shopify connection**
On the “Shopify Store” card, click “Connect.”
- 4 Enter your store address**
Type it as yourstore.myshopify.com (e.g. claura.myshopify.com). Use the .myshopify.com address, not your public website domain.
- 5 Continue to Shopify**
Click “Continue to Shopify.” You'll be taken to Shopify's own secure page.
- 6 Log in to Shopify (if asked)**
Sign in to your Shopify admin if you aren't already.
- 7 Approve access**
Shopify shows what NQ can access — read-only access to your orders. Review it and click “Install.”
- 8 You're connected**
You'll return to NQ automatically and the Shopify card shows “✓ Connected.” Your reports start using your store data.

WHAT NQ CAN AND CAN'T DO

✓ **Can** read your order data to build your reports.

✗ **Can't** change, add, or delete anything in your store.

✗ **Can't** see your customers' card or payment details.

You can disconnect at any time from the Shopify card in Brand Library.

Tip — finding your .myshopify.com address: in Shopify admin go to Settings → Domains, or look at your admin web address (it contains yourstore.myshopify.com).
